

Build Cubbles to provide encapsulated functionality.

Share Cubbles to be used within any web application.

Use Cubbles to create next generation web applications.

[Cubbles101](#) for a short introduction.

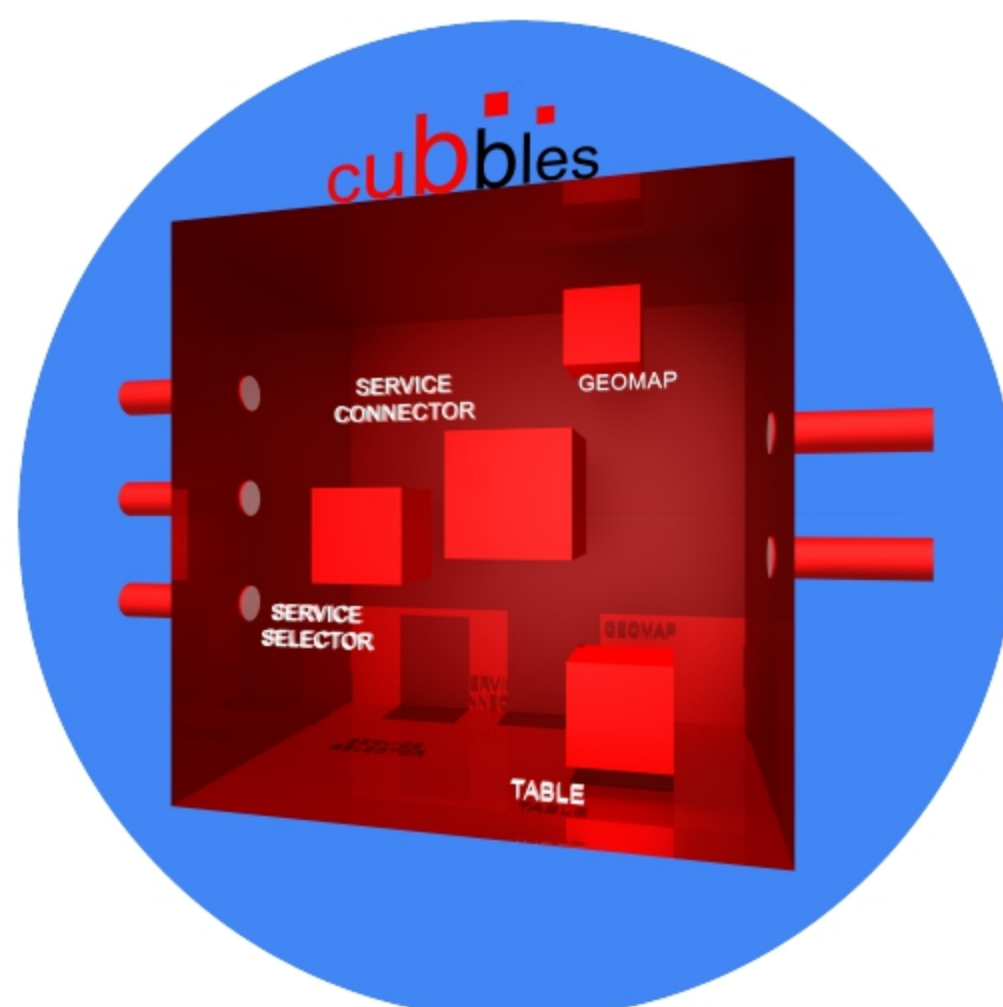

Build Flexible and Maintainable Webapps With Loosely Coupled Components.

Decompose the complexity of your use cases into appropriated functional units.

Design your solution by identifying components and declaring their interfaces as well as connections between them.

Develop, test and maintain (bugfix, improve) components within their isolated codebase over a long term with manageable risks. If appropriated components are already available, just use or adapt them for your context.

Compose your solution by connecting needed components.

Our Services Support You to Satisfy Your Customers.

Demos / Training: You want to know all about component based development with Cubbles? Let's arrange demo- and training sessions.

Technical Design: We provide support for the technical design of components and web-applications.

Component Development: You are looking for components which are ready-to-use? We are glad to develop them for you.

Hosting: We provide server-side stores for your components on a Platform as a Service (PaaS) basis. In addition we offer on-premise installation and support.
